

4. Atlas- electronic solution for German customs procedures

Since we deal with the German electronic customs procedures, we are in a position to provide customs declarations (import and export) for any German customs office.

With the IT system ATLAS (automated tariff and local customs clearance system), the Ministry of Finance provides the conditions for extensively automated customs clearance and monitoring of cross-border movement of goods for German customs administration.

ATLAS is used to electronically process declarations for the transportation of goods and the subsequent transfer of these goods into a customs procedure as well as administrative acts. This means that the parties involved can electronically register their entry and exit summary declarations as well as customs declarations for the transfer of goods.

The declaration data is archived in a central location and made available to the central office for risk analysis (customs), the Federal Statistical Office, the Federal Office of Economics and Export Control, the Federal Office for Agriculture and Food, the auditing services, customs investigation offices, and the Land revenue authorities in accordance with data protection regulations.
